. Update your browser to enjoy all this functionality .[Pharmaco-genetics and development of new medicine]. The term pharmacogenetics is derived from the Latin words "pharmaco" - which means "combining drugs" and "genetica", which means "study of genes". Pharmacogenetics of a drug is the study of how a person's genes affect the way a drug is metabolized, distributed, or excreted. In order to understand the factors that affect the way a drug is eliminated and to determine which patient is an appropriate candidate for drug therapy, we need to know the individual's differences in pharmacokinetics of a drug. Pharmacogenetics is a new approach in human genetics and provides the opportunity to "tailor" medicine. Pharmacogenetics has been studied and applied to the treatment of inherited retinopathies, cancer, HIV/AIDS and many other diseases. Recently, we have begun to use pharmacogenetics for the treatment of common diseases such as diabetes, stroke and hypertension. Pharmacogenetics is a novel approach to develop new medicine and is useful in the future.
